CASE FILE: OPERATION IRONCLAD — The Invisible Message

Classification: Restricted | Dataset: house_data1000.csv

THE INTELLIGENCE

The bank's data scientists were clever. They didn't hide the code in a spreadsheet cell or a file name. They hid it in the data itself — encoded spatially, visible only when the numbers are rendered as a picture.

The message is invisible in raw form. You have to see it to believe it.

INTERCEPTED FIELD NOTES

> » "They used coordinates. Two columns. X and Y."
>
> » "Plot them against each other and step back. The picture will speak."
>
> » "Two digits. Written in noise."

YOUR OBJECTIVE

Use the x_position and y_position columns from the dataset.

Visualize them. The code will reveal itself.

Good luck, Detective.
